Scenario generator
built once, offline
Scenario inputs
requests, places, parties, vans, travel times
Hidden draws
patience, presence, Lyft delay; never shown to dispatcher
Recorded outcomes
waits, Lyft, van-km
Simulator (referee)
clock, van positions, riders aboard, request states; reveals each event only when it happens
observable state
plan and transfers
Decision step: sees only the past
Route generation
candidate routes per van
Van optimizer (MILP)
one route per van
Transfer rule
reads plan predictions; may move requests to Lyft
