> **THE PROJECT STORY**
>
> We wanted to study dispatch decisions. April's data described aggregate patterns rather than individual journeys, so we built plausible evenings from evidence and explicit assumptions. We checked the implementation, replayed identical evenings under different transfer rules, and found a conditional trade-off between timely service and Lyft use. Our next work tests how robust those findings are.

Team, roles and slides

Name	Role	Slides	From → to	Time
Irfan Setiadi	Opening presenter and design lead	1–5	When should Night Ride move a waiting request to Lyft? → We narrowed the question to one controllable decision	4:13
Miles Zhou	Presenter	6–13	April describes totals—not individual journeys → The evidence becomes a scenario blueprint	7:47
Youzhi Zhang	Presenter	14–21	Three components have different jobs → We checked implementation before interpreting outcomes	8:10
Vignesh Rajesh Babu	Presenter	22–28	The predictive rules reached more requests promptly—and used more Lyft → What we can defend today	6:16

Estimated total: about 26:26 of narration with pauses, plus about 45 s of handoffs: **about 27 minutes**. Reading numbers slowly can add about a minute; dropping the sentences marked [optional] saves about 1.5 minutes. **Timing remains an estimate until the team has rehearsed**; the limit is 30 minutes.

Key dates (fill in)

Presentation: _____ Full timed rehearsal: _____ Verification records due: _____

Open team action

Youzhi Zhang (verification section), before the presentation: confirm which designed-evening answer keys, if any, a team member re-derived by hand, so that slide 21 is stated honestly. Until then, say that the keys and checks were produced with AI assistance and checked by programs.

What is in this folder

- 01_Team_Presentation_Guide.pdf: Shared reference for everyone, also during the presentation: assignments, handoffs, Q&A navigation, terms, and every slide's narration and preparation notes.
- 02_Final_Presentation.pdf: The finalized slides as a PDF: 28 main slides, the backup divider on slide 29, backups on 30–38. The slide count and order are frozen. Some slide footers cite repository files and "methodology v1.5" section labels; use the guide's page references to the v1.6 PDF instead.
- 03_Scenario_Methodology_v1.6.pdf: The scenario methodology v1.6: the scientific source. Use the page references in the guide; you do not need to read it all.
- `presenter_briefs/`: One brief per presenter: your narration, handoffs, concepts, questions you lead on, your verification activity and a readiness checklist.
- `designer_Irfan_Setiadi/`: The editable PowerPoint for the design lead. Content is frozen; restyling must not change meaning.

Study order

1. Read the story above and skim the deck (02_Final_Presentation.pdf) once from start to finish.
2. Read the guide's "Presenters", "Plain-language reference" and "What every member must be able to explain".
3. Open your presenter brief. Read your slides' preparation notes in the guide (linked from your brief).
4. Do your verification activity: calculate first, then compare with the reference answer.
5. Rehearse your narration aloud with a stopwatch; then rehearse handoffs with your neighbours; then one timed full run.

What everyone must understand, and what your section requires

Everyone must be able to explain the seven points in the guide's section "What every member must be able to explain": why the data could not reconstruct journeys; observed vs derived vs assumed; why one dispatcher is held fixed; why a transfer does not end waiting; verification vs validation; why more service with more Lyft is a trade-off; and why the findings do not establish real Hopkins effects.

Your section additionally requires the concepts and questions listed in your brief. Route other questions to their owner (guide, "Quick Q&A navigation").

Recording your verification and rehearsal

> HUMAN VERIFICATION
>
> A program can generate and check an answer. Human verification means a teammate independently works through a defined example, records their calculation and compares it with the implementation.

Each brief contains one guided activity with a worksheet, a separately placed reference answer, a comparison checklist and a record table. Every record starts as **Awaiting human completion**. Fill in the record yourself (on paper or in a copy of the PDF): your name, the date, your result, any discrepancy, and what remains unverified. Then tick the readiness checklist at the end of your brief, including your own measured section time.
